

## Move Explain Everything™ Projects to an Apple Computer

Pam Buffington and Peter Tierney-Fife

### Overview

This is a process to save Explain Everything™ projects (in movie format) to an Apple computer using the *Image Capture* app. The *Image Capture* app can also be used to move pictures and other files from an iPad to an Apple computer.

### Export the Explain Everything™ File to Photos

Export the Explain Everything™ project to iPad Photos as a movie file

- » In the full feature interface, click on Export   
and choose “Photos”  in the Video tab  
  
Photos
- » In the Simple Interface, choose “Save or Export Project”   
and choose “Video to Camera Roll”   
Video to  
Camera Roll
- » The time taken for this process could be many minutes; it is based on the size of the project. The Explain Everything™ recording will have to “render” from an Explain Everything™ project to an MP4 file.

## Connect the iPad to the Computer

- » Connect the USB cable to the iPad then connect the USB cable to the computer
- » If prompted, "Trust" the computer
- » Note: If *iTunes* launches and asks if you want to import, you can quit *iTunes* (or, you can choose to import the video to your *iTunes* library, but it will not appear as a separate file on your hard drive)

## Launch *Image Capture* on Your Computer

*Image Capture* is an application that manages visual media and can import scans, photos, videos, and other files from a variety of devices.

- » Open *Image Capture* from your Applications folder or using Spotlight Search
- » If needed, click on the iPad name in the Devices area on the left side

- » Select "Import All" on the bottom right to import all files shown in the list
- OR
- » Import only some files by clicking on the files you want (for multiple files you can select a file then use shift-click or command-click on another file)
  - » If you want only selected files, click on "Import"
- OR
- » You can then drag the files from *Image Capture* to a folder on the computer
